

ISO Adapters

Actuator Shaft Adapters

Description

Flow Line Controls adapters provide a convenient means for reducing the ISO 5211 female-drive size on large actuators so they will fit smaller shafts on many valves. Flow Line Controls adapters feature a *Double Square* design enabling actuators to be installed not only in the standard in-line or across the valve positions but also in 45 degree increments. This versatility can be a real benefit when installing automated valves in close quarters.

Flow Line Controls has the greatest adapter size range in the industry. There are *twenty-two sizes* which means you will not have to "stack" adapters to achieve the size reductions required for your application.
